

Oracle Business Intelligence

Business Intelligence

Oracle Business Intelligence provides the most comprehensive business intelligence (BI) and analytic capabilities available today based on category-leading products for OLAP interactive dashboards, ad hoc analysis, proactive detection and alerts, advanced reporting and publishing, mobile analytics, desktop gadgets, and more.

Integrated Business Solutions

It's no secret that a fast-paced, thriving organisation, both large and small, must be able to process and analyse huge volumes of data stored everywhere in the organisation.

In fact, decision-makers in all areas of your business need quick access to accurate business intelligence (BI) to identify new opportunities and risks and then respond swiftly. To deliver these crucial insights and make them a seamless, real-time part of every performance management process, you need Oracle Business Intelligence.

Oracle Business Intelligence provides a common set of BI tools and shared services. The technology supports a broad range of operational and financial performance management applications, BI applications, and predictive analytic applications.

Based on an integrated, scalable, Webservices architecture, the open Oracle Business Intelligence can reduce your cost of ownership and provide pervasive BI through efficient self-service access to diverse datasources, and a common information model.

Pervasive Insight to Everyone, Everywhere

Oracle Business Intelligence provides complete, relevant insight to employees at all levels of your organisation, not just analysts.

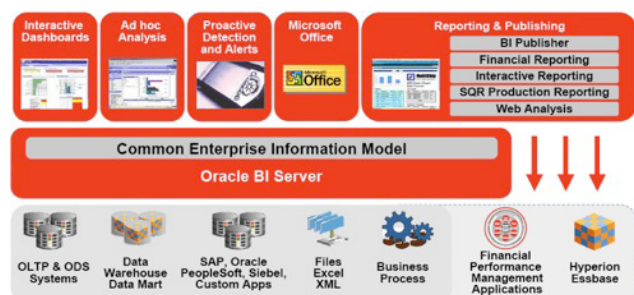

Information is optimised for the user's role by leveraging the unified BI foundation that drives intelligence-driven businesses processes and workflow. Business users can access information in the most intuitive manner, as a dashboard, through ad hoc analysis, via formatted reports, with integrations to Web-based or Office applications, or as mobile analytics embedded in alerts.

Finally, business users can work with Oracle Business Intelligence even when disconnected from the company network and seamlessly synchronise when back online.

Comprehensive Business Intelligence Functionality Built on a Unified Infrastructure

Oracle BI delivers the widest and most robust range of BI functionality on a single unified infrastructure.

The capabilities include interactive dashboards, full ad hoc queries and analysis, proactive intelligence delivery and alerts, enterprise and financial reporting, online analytical processing (OLAP) analysis and presentation, high-volume production reporting, real-time predictive intelligence, disconnected analytics, and integration with Microsoft Office.

Features

- Advanced enterprise reporting and publishing
- Comprehensive, best-of-breed capabilities
- Full ad hoc analysis over the Web
- Rich, interactive dashboards with guided analytics

Business Benefits

- Improves customer choice for BI solutions
- Offers consistent view of information and single-source accountability
- Integrates BI foundation with IT architecture

Professional Services

Capita IB Solutions has an excellent track record of delivering expert Oracle support and consulting to Public, Private and Not for Profit Organisations. Ranging from top-down business analysis and enterprise modelling to database design, application implementation and tuning, a comprehensive package of methodologies, support, training and consultancy services has been developed to ensure the success of all projects within a defined framework of quality, cost and time.

Business Strategy

Our consultants can work with you to ensure your business strategy is supported by a complete and deliverable Oracle solution.

Technical Support

We offer a full range of technical consultancy and support services to ensure the effective delivery of your Oracle solution.

Healthchecks

Our regular healthchecks review the solution architecture and recommend changes or enhancements.

Implementation & Design

We assist clients during all phases of the development life cycle, with teams encouraged to acquire the knowledge to maintain and support the systems.

“One of the most important values of Oracle’s BI solution is its total cost of ownership. One of our staff created 400 reports used by 1,250 users within a few months that is very cost effective.”

William Duffy
Data Warehousing Project Manager
Pitney Bowes

Hot-Pluggable Business Intelligence Infrastructure allows you to build on existing investment

Because Oracle BI is designed to easily integrate with existing data sources and IT infrastructure, organisations can protect existing IT investments while extending their BI capabilities. Oracle BI integrates with any data source; ETL tool; business application; application server; security infrastructure; portal technology; and other front-end or analytical tool.

The suite accesses data from multiple heterogeneous sources - including relational databases such as Oracle Database, IBM DB/2, Teradata, Microsoft SQL Server; multidimensional sources such as Oracle Essbase, SAP NetWeaver BI, Microsoft Analysis Services; flat files; XML data; and unstructured data.

Capita IB Solutions Consulting Services

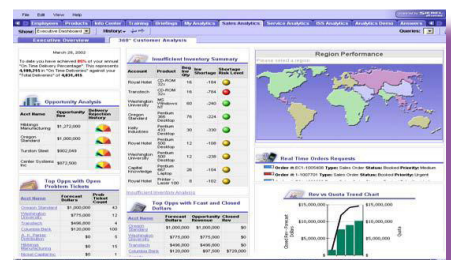

Capita IB Solutions can help with the initial installation, configuration and data load of the Oracle BI Applications, working with you then to identify the gaps between the provided out-of-the-box functionality and the reports and data that you require.

We then work closely with your internal project team to deliver any required customisations, put the applications into production and support you as you add new data sources over time.

Licensing and Support

The Oracle BI Applications, along with the accompanying Oracle BI Enterprise Edition and Oracle Data Integrator, can be licensed through Capita IB Solutions along with continuing support and product upgrades.

Once your implementation is in place, we can support you on an ongoing basis to deliver enhancements and upgrades as you deploy the product throughout your organisation.
